

## Important Information

### Update Mobile Media for PC and NevoMedia Server Software

It is recommended that you update the NevoMedia Server application, which is part of the Mobile Media for PC software that is on your Companion CD. Depending on the way you organized your photos on your personal computer, the NevoMedia Server may not recognize the photos and may not make them available to your HP iPAQ for viewing.

To perform this update, be sure your personal computer is connected to the Internet.

- If you have installed the NevoMedia Server software, open NevoMedia Server, click **Help** then select **Check for NevoMedia Server Updates**. You will be directed to [www.mynevo.com/updates](http://www.mynevo.com/updates) where you can download and install the updated software.
- If you have **not** installed Mobile Media for PC and NevoMedia Server from the Companion CD, visit [www.mynevo.com/updates](http://www.mynevo.com/updates) to download and install the updated software.

All updates for your HP iPAQ can also be found at [www.hp.com/support](http://www.hp.com/support). Select your country, enter your product name and number, search for Drivers and Software, and follow the directions.
